Brian Ashihara

Full Stack Developer | Node.js, Go, React, Next.js | Applied AI

Birigui, SP, Brazil | +55 18 99778-1779 | brian09.c.a@gmail.com | linkedin.com/in/brianashihara | github.com/BrianAshihara | portfolio-brian-ashihara.vercel.app

Summary

Full Stack Developer with production experience in Node.js, React, Next.js, Go and Google Cloud Platform (GCP). I work on both the backend and frontend of a SaaS platform, focusing on third-party API integrations, high data volumes and payments. I integrate LLMs into products and build with AI agents every day. Computer Engineering student at IFSP, graduating in Dec 2026.

Professional Experience

Marketize Sales - financial reconciliation platform for marketplace sellers

Full Stack Developer | Jul 2026 - Present

Software Engineering Intern | Jan 2026 - Jul 2026

- Develop and maintain the reconciliation platform daily, with a Node.js and Go backend and a React/Next.js frontend.
- Rewrote report generation in Go as an urgent fix, after the Node.js version on Cloud Functions (GCP) was timing out for several clients: eliminated the timeouts and cut execution time by 50%.
- Built an internal lead finder and integrated a lightweight LLM that automatically evaluates and qualifies leads.
- Built the Shein and TikTok Shop API integrations, handling authentication, high order volumes and rate limits. Also maintain the Mercado Livre and Shopee integrations, adapting the system to frequent changes in API behavior and fields.
- Migrated parts of the order import system from Node.js to Go.
- Integrated Pix (Brazil's instant payment system) via Mercado Pago alongside Stripe, and fixed race conditions in the Stripe subscription flow.

Projects

CoreLedger - Go, PostgreSQL, sqlc, k6, GitHub Actions | github.com/BrianAshihara/CoreLedger

- Double-entry ledger engine with a REST API that simulates a fintech's money movement infrastructure, built spec-first with AI agents.
- Consistency under concurrency (row locks in a fixed order, no deadlocks) and idempotency via Idempotency-Key, verified with the race detector and validated in CI against PostgreSQL 16 and 18.
- k6 load testing: about 1,800 transfer requests/s at 15 ms p95 latency; a database restart under load caused no 500 errors, and reconciliation was correct across 819k transactions.

CelerPay - C++23, SIMD (AVX2), CMake, libFuzzer | github.com/BrianAshihara/CelerPay

- Zero-dependency library for Brazilian payments: Pix (BR Code and QR Code), boleto, CPF/CNPJ (including the alphanumeric format) and reconciliation of CNAB 240, OFX and incoming Pix statements.
- CPF validation at 72 million/s with SIMD, 17x faster than brazilian-utils (JavaScript) and 371x faster than validate-docbr (Python); reconciles 1 million charges in 1.9 s.
- Tested with fuzzing and sanitizers (ASan, UBSan), with CI on GitHub Actions and builds for Windows, Linux and macOS.

Blockchain Voting (Capstone Project) - Python, Next.js

- Distributed blockchain built from scratch for voting: peer-to-peer network in Python, block validation with SHA-256 hashing and a Next.js web interface.

AI Project - Python, GGUF

- Offline chatbot running a GGUF LLM locally, including a study of embeddings.

Other: Tudu, a desktop task manager built with Tauri 2, React and Rust (local SQLite, Kanban board); Discord bot in TypeScript that announces new game patches (Cloudflare); Pokédex in React with TypeScript (PokeAPI); iris recognition through image processing, using the Hough Transform and LBP (Python, OpenCV).

Education

Bachelor's in Computer Engineering - Insituto Federal de São Paulo (IFSP), Campus Birigui |
Mar 2021 - Dec 2026 (expected)

Technical Skills

- **Languages:** Go, TypeScript, JavaScript, Python, C++, Rust, SQL
- **Backend:** Node.js, REST APIs, Cloud Functions, third-party API integration, concurrency, idempotency
- **Payments:** Mercado Pago (Pix), Stripe
- **Frontend:** React, Next.js, Tailwind CSS, Vite
- **Databases:** Firestore, PostgreSQL, MySQL, SQLite
- **Cloud & DevOps:** Google Cloud Platform (Cloud Functions, Cloud Scheduler, VMs), Firebase, Vercel, Cloudflare, GitHub Actions (CI/CD), Git
- **Artificial Intelligence:** AI agent-assisted development, production LLM integration, local LLMs, embeddings
- **Quality:** integration testing, load testing (k6), fuzzing, data structures

Languages

- **Portuguese:** native
- **English:** advanced (TOEIC certified)

Awards

- 1st place, CPIF 2025 Programming Marathon
